

The ruby is harvested from grapevines. The emerald is harvested from bushes in Vow. What plants should the diamond and sapphire be harvested from?

To match the thematic identity and media elements of **Vid (North)** and **Pix (East)**, here are natural plant sources for the Sapphire and Diamond:

1. Sapphire (Vid - North): Harvested from River Reeds & Water Lilies
- **Lore Rationale:** Vid is defined by motion, flowing streams, and time currents. Aquatic plants like **River Reeds** or **Flowing Kelp** grow along the northern riverbanks and moving waters.
 - **Harvest Feel:** Harvesting reeds from the water's edge captures the essence of untangling stream reels and gathering deep blue Sapphires from the moving current.

2. Diamond (Pix - East): Harvested from Frost Palms & Glacial Lichen
- **Lore Rationale:** Pix represents stillness, observation, and sub-zero temperatures along the Glacial Shelf. Crystallized flora like **Frost Palms**, **Ice Petals**, or dense **Glacial Lichen** thrive in the frozen soil surrounding the Grand Library.
 - **Harvest Feel:** Chipping away at frozen, glass-like flora to unearth hard, brilliant Diamonds reflects the light and static ice mechanics of the eastern realm.

Complete Crop-to-Gem Mapping

Gem Currency	Region	Plant Source	Media / Element Theme
Emerald	Vow (South)	Bushes & Weeds	Rooted Soil, Oaths & Binding Law
Ruby	Nov (West)	Grapevines	Thermal Heat, Vineyards & Acoustic Voice
Sapphire	Vid (North)	River Reeds & Lilies	Flowing Streams, Motion & Time Memory
Diamond	Pix (East)	Frost Palms & Ice Lichen	Sub-Zero Glacial Ice, Stillness & Light
