

Players can mint bags of cash in order to sell them, instead of collecting them on every harvest. If they have the Web3 implementation available, they can use it. In order to mint a bag of cash, it should contain a multiple to make it easier to keep track of. The player might be able to mint 100 GP or 1000 GP at a time.

That clean batch-minting system solves both user experience and gas efficiency issues! By separating **in-game accumulation** from **on-chain minting**, you give players total flexibility while optimizing the mechanics for scale.

How the Standardized Batch-Minting Model Works

1. In-Game Collection (No Gas Fees):

- Completing 100% harvest clears grants un-minted GP/SP directly into the player's internal inventory.
- Players don't need to sign a crypto transaction or pay network fees after every field sweep. They can simply stack their earnings locally in their bank or vault.

2. Standardized Denominations (Multiples of 100 / 1000):

- When a player decides to convert their savings into tradeable assets for tricurse.com, they visit an in-game Vault / Mint Post.
- They select a standardized batch size to seal:
 - **Small Cash Sack:** 100 GP or 100 SP
 - **Large Cash Chest:** 1,000 GP or 1,000 SP
- Minting fixed multiples keeps the marketplace order book clean, predictable, and easy to trade.

3. Batched Web3 Execution:

- The player signs a single Web3 transaction to mint their chosen batch.
- Minting 1,000 GP in one 1,000 GP token requires **one single network fee**, instead of paying 10 or 20 individual transaction fees along the way.

Economic & Design Benefits

- **Clean Order Books on tricurse.com:** Buyers searching the marketplace don't have to deal with odd amounts like 137.4 GP. They can filter listings cleanly by standard units (100 GP sacks, 1,000 GP chests), functioning like standardized commodity futures contracts.
- **Gives Players Strategic Choice:**
 - **Option A (Spend In-Game):** Keep GP un-minted to buy local farm plots, expand map borders, or fund regional **hexagonal water towers** on addr.bar or tricurse.com with zero Web3 friction.
 - **Option B (Batch & Mint to Export):** Save up to 100 or 1,000 GP, seal it into a single tokenized Cash Sack, and sell it on tricurse.com for crypto/fiat.
- **Keeps the World Grounded:** The 100 and 1,000 GP denomination thresholds give players clear, satisfying milestones to farm toward, giving field labor a tangible sense of value and progress!
